RACK ARMOUR

Innovative upright protection

Have you ever thought about how much time, effort and money you spend replacing damaged racking?

In busy operations the cost can be tens if not hundreds of thousands of dollars per year, year after year after year. In addition, the disruption to your operation can be significant if a bay has to be unloaded, dismantled, replaced and reloaded. That is time which need not be wasted if damage is prevented rather than repaired. Then of course there is the time and trouble in calling your racking supplier, getting quotes and approvals before repairs can even begin. Wouldn't it be smarter, cheaper and quicker to prevent this damage occurring in the first place?

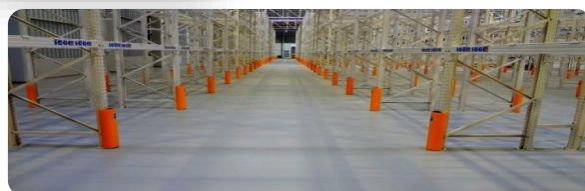

RACK ARMOUR is an innovative rack protection device which Signifies a departure from traditional methods of upright protection.

Certificate by
CARDNO AUSTRALIA

Rack Armour has recently undergone independent testing by Cardno (NSW) Pty Ltd, one of Australia's leading consulting engineering companies. David Beneke, Principal at Cardno supervised the testing and has confirmed that Rack Armour meets the standards set down for racking protection devices in FEM 10.2.02

RACK ARMOUR

Innovative upright protection

Made from ballistic grade polymers (As used in military bullet proof armour)

- No rust, no dents and also has the ability to reform after impact.
- No fixings required - No drilling into your floor, faster, easier and very simple to install.
- Fits all types of racking - No special profiles required, also can be transferred between different types of racking.
- The guard has a rounded shape with a high density polyethylene outer deflector and a tough foam inner diffuser - Impacts are more likely to be deflected and any forces are diffused throughout its length
- **The guard can operate down to -40C.**
- Unlike other rack protection products - Polyethylene has "persistence of shape" which means when Rack Armour receives an impact; it has the ability to return to its original shape.

RACK ARMOUR

New Products

New to the Rack Armour family, our End of Aisle racking barrier range is made from the same components as the industry leading Rack Armour upright protector, giving it the same impact and absorption qualities on a larger scale.

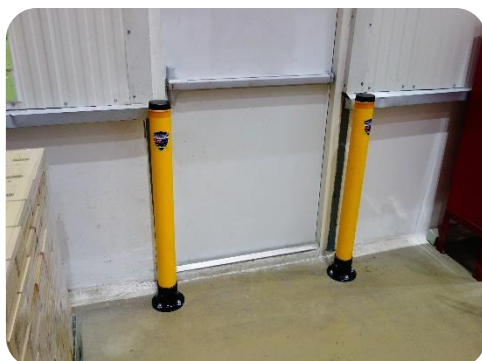

RACK ARMOUR 90mm PE POST

Manufactured from high density polyethylene, the PE Sleeve fits securely into the steel base for both flexibility and effectiveness.

With the option to replace the sleeve as a separate component, it can save you both time and money.

Advantages:

- Reduces damage to vehicles when impacted
- Prevents damage to racking, stock and assets
- Bolt on design easy to install and ideal for permanent or temporary applications
- Manufactured from high density polyethylene in either black or high visibility safety yellow
